Sequence 1, Application US/09050861B

Patent No. 655314

GENERAL INFORMATION:
APPLICANT: Bayan, Donald

ITILE OF INVENTION: TOSO AS A TARGET FOR DRUG SCREENING
FILE REFERENCE: RIGL-002CON

CURRENT APPLICATION NUMBER: US/09/050,861B

CURRENT FILING DATE: 1998-03-30

PRIOR APPLICATION NUMBER: US/09/651,150B

PRIOR FILING DATE: 2000-08-30

PRIOR FILING DATE: 2000-08-30

PRIOR FILING DATE: 1998-03-30

INUMBER OF SEQ ID NOS: 35

SOPTWARE: PATENTIN PATENTIN OF SEQ ID NOS: 35

SOPTWARE: PATENTIN PATENTIN VETSION 3.1

LENGTH: 1911

TYPE: DNA
ORGANISM: Homo sapiens

RESULT 1 US-10-001-073-14

Sequence 14, Application US/10001073

Publication No. US2003013725A1

GENERAL INFORMATION:

APPLICANT: Liggett, Stephen

APPLICANT: Small, Kirsten

ITTLE OF INVENTION: Alpha-2-adrenergic receptor polymorphisms

FILE REFERENCE: 13073-PCT

CURRENT PILLING DATE: 2001-11-01

NUMBER OF SEQ ID NOS: 53

SOPTWARE: Patentin Ver. 2.0

SEQ ID NO 14

LENGTH: 21

TYPE: DNA

ORGANISM: Homo sapiens

US-10-001-073-14

Submitted (24-SEP-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA Sequencing is completed to a minimum standard of double strand sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 3 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality does not meet this standard, it will be indicated in the annotation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              18;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         searches of the complete sequence against a peptide database and the plant EST database at TIGR (http://www.tigr.org/tdb/tgi.shtml). Annotated genes are named to indicate the level of evidence for their annotation. Genes with similarity to other proteins are named after the database hits. Genes without significant peptide similarity but with EST similarity are named as unknown proteins. Genes without protein or EST similarity, that are predicted by more than two gene prediction programs over most of their length are annotated as hypothetical proteins. Genes encoding tRNAs are predicted by tRNAscan-SE (Sean Eddy, http://genome.wustl.edu/eddy/tRNAscan-SE/). Simple repeats are identified by repeatmasker (Arian Smit,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This BAC overlaps with rice BAC OSJNBb0015I02 (AC135563).                                 sequence clones from Drosophila Gene Collection 1 (Rubin et al., Science 2000). The sequence has been subjected to integrity checks for sequence accuracy, presence of a polyA tail and contiguity within 100 kb in the genome. Thus we believe the sequence to reflect accurately this particular cDNA clone. However, there are arrifacts associated with the generation of cDNA clones that may have not been detected in our initial analyses such as internal priming, priming from contaminating genomic DNA, retained introns due to reverse transcription of unspliced precursor RNAs, and reverse transcription of unspliced precursor RNAs, and reverse transcription shout this sequence, including its location and relationship to other sequences, please visit our Web site (http://fruitfly.berkeley.edu) or send email to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   17;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   4

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one m13 subclone.

## NOTES:

Coding sequences below are predicted from computer analysis, using the program Genefinder(P. Green and L. Hillier, ms in preparation) 'ocation/Qualifiers

Annotated genes are named to indicate the level of evidence for their annotation. Genes with similarity to other protesins are named after the database hits. Genes without significant peptide similarity but with EST similarity are named as unknown proteins. Genes without protein or EST similarity, that are predicted by more than two gene prediction programs over most of their length are annotated as hypothetical proteins. Genes encoding tRNAs are predicted by tRNAscan-SE (Sean Eddy, http://genome.wustl.edu/eddy/tRNAscan-SE/). Simple repeats are identified by repeatmasker (Arian Smit, http://ftp.genome.washington.edu/RM/RepeatMasker.html).  FEATURES  1. 91268 /organism="Arabidopsis thaliana" /cultivar="Columbia"
